FRIDLEY MUNICIPAL WELLFIELD SITE

***RESPONSIBLE PARTY SEARCH REPORT
APRIL 14, 1999***

BY

RACHEL LAVELL

PRP SEARCH SPECIALIST

MINNESOTA POLLUTION CONTROL AGENCY

DEPARTMENT: POLLUTION CONTROL AGENCY

DATE: APRIL 14, 1999

TO: FILE

FROM: Rachel LaVell
PRP Search Specialist
651/296-7187

SUBJECT: Fridley Municipal Wellfield Site (Site)

This memorandum describes the past commercial usage of the above-mentioned site (Site), as well as adjacent properties. This information is to be used as part of the Potentially Responsible Party (PRP) Search and any information identifying PRPs for this site should be treated as nonpublic as described in the Minnesota Data Practices Act, Minn. Stat. § 13.39. This information shall become public when the Minnesota Pollution Control Agency (MPCA) has concluded its PRP investigation.

This memorandum is divided into six sections: 1) a summary of contaminants found at the Site; 2) a review of potential contamination sources located near, or associated with, the Site; 3) Cole's directory information describing businesses located near the Site; 4) Sanborn insurance maps of the site and adjacent properties; 5) a title search of the Site (if applicable); and 6) a conclusion summarizing the information from the first five sections. The Preliminary Assessment Executive Summary and a Site Screening for the Site can be found in Attachment 1 to this memo.

I. Summary of Contaminants found at the site

1,1,2 trichloroethene: used as solvent for fats, waxes, resins and alkaloids

Source: Merck Index, Eleventh Edition.

Contaminants detected in the city wells include: methyl isobutyl ketone, methyl ethyl ketone, 1,1,2 trichloroethane, 1,1,1,2 tetrachloroethene, 1,1,1 trichloroethane, o-xylene, cis-1,2 dichloroethene, and 1,1 dichloroethane.

II. Review of Hazardous Waste Manifests and Licenses

A. Hazardous Waste Generators

The well field is located approximately 0.2 miles northwest of Moose Lake in the city of Fridley, and is bounded by 63rd Avenue NE on the north, 61st Avenue NE on the South, 7th Street NE on

the west and Fridley Middle School is on the east. The Fridley Community Education Center and Fridley High School are also located immediately south of the site.

A Review of the MPCA's Hazardous Waste Management Information System (HWIMS) data base revealed 192 hazardous waste generators currently operating in the city of Fridley. Forty-five are located within approximately 2 miles of the Site (the waste stream of each of these 45 companies can be found in Attachment 2). Of the 45 businesses three dry-cleaners and two other businesses list either trichloroethylene or trichloroethane in their waste streams (an HWIMS List and manifests for the three dry-cleaners and two other businesses can be found in Attachment 3).

Business	Address	Waste
1. Fridley Dry Cleaners	6544 University Ave. NE	tetrachloroethylene
2. Plaza Dry Cleaner	6259 University Ave. NE	tetrachloroethylene
3. Church of St. William	6150 5th Ave. NE	no data
4. John Cretzmeyer, DDS	1099 E. Moore Lake Drive	no data
5. Fridley High School	6000 W. Moore Lake Drive	no data
6. David Padula, DDS	6279 University Ave. NE	x-ray film, lead foil
7. Woodcrest Baptist Church	6875 University Ave. NE	no data
8. Carquest M & I Auto	6005 University Ave. NE	no data
9. Abra Auto Body	7710 University Ave. NE	waste oil, waste paint thinner
10. Associated Skin Care Specialists	7205 University Ave. NE	no data
11. Bona Amoco	5311 University Ave. NE	petroleum naphtha

36. Target Distribution Ctr.	1090 - 73rd Ave. NE	no data
37. Tempec Inc.	1137 - 73rd Ave. NE	no data
38. Aamco Transmission	940 Osborne Rd.	stoddard solvent
39. Oral & Maxillofacial Surg.	500 Osborne Rd.	waste fixer
40. Awaijane Enterprises	990 Osborne Rd.	no data
41. Fridley Auto Body	960 NE Osborne Rd.	paint thinner, toluene
42. H & F Manufacturing	128 Osborne Rd.	no data
43. Premier Industries	980 Osborne Rd.	no data
44. Voights Bus Service	1240 Osborne Rd.	no data
45. Moore Lake Dental	6230 Highway 65 NE	x-ray photochemicals

B. Spills information

A review of the MPCA's spills data base revealed eighty-four leaksites in the city of Fridley (Attachment 4). Seventy (70) of these are closed including the leaksites at Fridley High School, Fridley Middle School, Hayes Elementary School and Total Petroleum. Of the remaining 14 leaksites, five of them are within approximately two miles of the Site. These include spills at the city of Fridley Municipal Garage, the Fridley Fast Lube, the Fridley Public Works, the Holiday Station Store # 118, the Sinclair Service Station and Superamerica #4175 (all leaksites including specifics on the 14 open leaksites can be found in Attachment 4). It should be noted that these leaksites are leaks of petroleum products and not hazardous waste.

C. Solid Waste Facilities

The Minnesota Open Dump Inventory (ODI) identifies eighteen separate dumps, waste sites, and locations of "hot line" complaints of waste disposal in the city of Fridley. The Moore Lake Dump is the only site on the ODI located near the Site. According to a 1981 MPCA Solid Waste Section inspection report, the Moore Lake Dump was privately operated by a hog farmer who fed garbage to his hogs. The dump closed in the mid 1940's and homes are currently built upon the dump (see Attachment 5).

III. Cole's Directory Information

To learn more about the types of businesses located in the city of Fridley, I reviewed local telephone directories for years 1950, 1957, and 1963. Additionally, I reviewed "An Invitation to Industry" published by the city of Fridley in 1963 (see Attachment 6). Based on my review of these sources, it appears that there was little industrial activity near the Site. The most common businesses near the site were garages and gas stations located on University Avenue and Main Street, to the west of the Site.

IV. Sanborn Insurance Maps

The Minnesota Historical Society does not have Sanborn insurance maps for the city of Fridley.

V. Title Search

A title search was not conducted for this site because the source of the contamination is believed to originate off site.

VI. Conclusion

Although there is a large number of waste sites, leaksites, and hazardous waste generators in the city of Fridley, the area surrounding the site is mostly residential. Most business near to the Site are located on Main Street and University Avenue, to the West of the Site but a closer look at those sites does not show any leaks or generator/transport information that could lead to the contamination at this site. After careful review I have not found any responsible parties for the Site.

ATTACHMENT 1

Minnesota Pollution Control Agency

PRELIMINARY ASSESSMENT NARRATIVE SUMMARY

Fridley Commons Park Well Field

August 9, 1991
MND985701309

The Fridley Commons Park Well Field (Site) is located in the city of Fridley, Anoka County. The Site is about 50 acres in area and consists of several outdoor ballfields, tennis courts, playground, hockey rinks, and a high school. Eight municipal supply wells are located on the Site. The oldest well was drilled in 1961. Surrounding land use is largely residential with commercial/industrial business.

In February 1984, trichloroethene (TCE) was detected at a level of 11 ug/l in city well #9, a Prairie du Chien bedrock well located well field. At the time, TCE was not detected in water blended with other wells in the well field. Subsequent testing revealed four bedrock municipal supply wells in the well field were contaminated with low levels of volatile organic compounds, including TCE. In November 1989, water blended from the well field was found to exceed the Maximum Contaminant Level (MCL) of 5 ug/l for TCE, and City Well #9 was taken out of service.

Contaminants detected in city wells in the Commons Park Well Field include volatile organic compound, some which are associated with industrial solvents. These chemicals include 1,1,2 trichloroethene (TCE); methyl isobutyl ketone; methyl ethyl ketone; 1,1,2 trichloroethane; 1,1,2,2 tetrachloroethene; 1,1,1 trichloroethane; o-xylene; cis-1,2 dichloroethene; and 1,1 dichloroethane.

To date, a source of the contaminated ground water has not been identified, but is believed to originate off-site. A search of MPCA records has identified approximately 50 potential contaminant sources in the surrounding area. The city of Fridley has hired an environmental consultant and has installed three glacial drift monitoring wells in the well field to further assess the situation.

The Site is located within the Twin Cities Basin, a structural geologic depression consisting of over 1,000 feet of Precambrian and Paleozoic sedimentary rock strata, mantled by over 100 feet of unconsolidated glacial drift.

The major aquifer in the region is the Prairie du Chien - Jordan Aquifer, consisting of dolostone and sandstone units. Wells in the Fridley Commons Park Well Field are open to the Mt. Simon Sandstone and Prairie du Chien Group. The well field provides water to a population of about 29,000. Other municipal and community water supplies located within a four-mile radius of the Site include Arden Manor Mobile Park, Blaine, Brooklyn Center, Brooklyn Park, Fridley Terrace Mobile Park, Mounds View, New Brighton, St. Anthony, and Spring Lake Park.

For persons who are hearing and speech impaired, call: TDD (612) 297-5353.

Office Memorandum

DATE: April 1, 1997

TO: Maureen Johnson
Project Manager
Site Response Section

FROM: Pat Lannon *Pat Lannon*
Hydrogeologist
Site Response Section

PHONE: 282-5988

SUBJECT: Site Screening of Fridley Municipal Well Field Site

This memo presents results of a site screening evaluation of the Fridley Municipal Well Field Site (Site) located in Fridley, Minnesota, using the Site Response Section "Draft Site Screening Evaluation Guidelines" document dated April 26, 1996.

The draft site screening evaluation guidelines specifies several steps to screen a site, which primarily consist of the following:

1. Identify the chemicals of potential concern (COPCs);
2. Identify exposure pathways;
3. Screening against the appropriate criteria (air, soil, ground water, sediment, surface water); and
4. Evaluating short-term hazards.

Each of these steps is discussed below. Prior to this, however, a brief informational background discussion is presented.

Background Summary

The well field site is located approximately 0.2 mile northwest of Moore Lake in the city of Fridley, and is bounded by 63rd Avenue NE on the north, 61st Avenue NE on the south, 7th Street NE on the west, and Fridley middle school on the east. The Fridley Community Education Center and Fridley High School are also located immediately south of the site.

There are 8 municipal wells located at the site. Four wells are open to the Mt. Simon - Hinckley aquifer (wells 2 - 5), and four are open to the Prairie du Chien aquifer (wells 6 - 9). In addition, the Fridley Middle School well is located immediately beyond the eastern property boundary, and the Fridley High School well is located a short distance south of the site, as shown in below in Figure 1.

Fridley Municipal Well Field Site Screening

April 1, 1997

Page 3

Previous investigations conducted at the site have confirmed the presence of trichloroethylene (TCE) in the ground water at the site; typical TCE degradation compounds have not been observed. The TCE contamination is believed to be limited to the Prairie du Chien Group. Despite several previous investigations, the source of the contamination remains unidentified (Barr Engineering, 1997), but is known to originate from an off-site source.

The four steps of the site screening process are presented below, and are followed by a brief "Conclusions" section.

1. Identify the Chemicals of Potential Concern (COPCs):

Based on available data, the COPC at this site is determined to be Trichloroethylene (TCE). Other compounds have been detected infrequently at trace concentrations and would not normally be considered as COPCs. However, because it is possible that TCE could degrade over time, its degradation products should also be noted as COPCs, although they are not present now. Specifically, this includes cis-1,2-Dichloroethylene, trans-1,2-Dichloroethylene, and Vinyl Chloride

These are being retained as COPCs only because of their potential for being detected in the future.

2. Identify the Exposure Pathways:

In conjunction with Table 1 of the Site Screening Evaluation Guidelines document, the following potential exposure pathways have been identified:

	Air	Soil	Water	Sediment	Surface Water
Inhalation	Unlikely	Unlikely	Present	Unlikely	Unlikely
Ingestion	Unlikely	Unlikely	Present	Unlikely	Unlikely
Dermal	Unlikely	Unlikely	Present	Unlikely	Unlikely

Site screening evaluation of the pathways determined to be "Unlikely" will not be performed.

As shown above, the only known pathway of concern at the site is ground water, due to the fact that the contamination at the site originates from an unknown off-site source and is limited to the ground water in the Prairie du Chien Group.

3. Screening against Applicable Criteria:

The maximum concentrations and corresponding screening criteria comparison for each municipal well in use at the site are shown below.

Fridley Municipal Well Field Site Screening

April 1, 1997

Page 5

monitoring should be considered for these other potential receptor sites that may be at risk. This is discussed further in the section below.

Conclusions

Based on available information, a ground water investigation of Moore Lake Dump site as a possible source area should be performed. In addition, continued tracking of water quality data at all sites in the area should be performed. Additional recommendations can be found in the *Evaluation of Groundwater Contamination* report (Barr, 1997).

In particular, the school wells to the east and south of the site should continue to be monitored at a much more frequent interval (quarterly monitoring is suggested). Although data on file in our office show that the most recent sampling events have not exhibited TCE contamination in these wells, TCE has been detected in the middle school well in the past (a maximum of 4.9 µg/l was observed in the middle school well in July, 1992). In addition, consideration should be given to adding the schools to the municipal water supply system **after** a permanent solution for the municipal well contamination is implemented.

Because future water use projections indicate that the MCL for TCE will likely be exceeded in the Fridley municipal water supply system (Barr, 1997), a permanent solution to the Fridley municipal water supply problem must be implemented. This could involve the installation of new wells, or treatment of the contaminated water by air stripping or carbon adsorption. Further study should be conducted to determine the most cost-effective solution.

Attachments: Summary of Drinking Water "Criteria" (2-Page Spreadsheet)

SUMMARY OF DRINKING WATER "CRITERIA"				Last Update = February 1997							
Chemical	CAS Number	State Criteria			Federal Criteria (d)						
		Cancer Class	HRL (ug/l)	Target Endpoint	MCLG (ug/l)	MCL (ug/l)	Regulatory Status	Basis	ug/l at 1E-5	Lifetime Health Advisory (ug/l)	
		(a)	(b)	(c)							
ORGANICS											
Trichloroethylene (1,1,2; TCE)	79-01-6	B2	30	cancer	zero	5	Final	(DL)	30	Final	
FOOTNOTES:											
(a) Group A - Human carcinogen (sufficient evidence of carcinogenicity in humans)											
Group B - Probable human carcinogen (B1 - limited evidence of carcinogenicity in humans; B2 - sufficient evidence of carcinogenicity in animals with inadequate or lack of evidence in humans).											
Group C - Possible human carcinogen (limited evidence of carcinogenicity in animals and inadequate or lack of human data)											
Group D - Not Classifiable as to human carcinogenicity (inadequate or no evidence)											
Group E - Evidence of noncarcinogenicity for humans (no evidence of carcinogenicity in adequate studies).											
(b) HRL (Health Risk Limit) - the concentration of a ground water contaminant, or a mixture of contaminants, that can be safely consumed daily for a lifetime. HRLs are promulgated by rule. HBV (Health Based Values) are derived by the same methodology and have the same meaning as HRLs; however, HBVs are not promulgated under rule.											
Values in Italics represent Health Based Values derived under the MPCA/MDH MOA											
Noncarcinogens - assume a relative source contribution factor utilized was generally 0.2 - for exceptions see M.R. Parts 4717.7100 - 4717.7800 Rev. 12/94.											
Carcinogens - set at target risk level of 1E-5 (exception - Group C carcinogens utilize noncancer methodology with additional uncertainty factor of 10)											
Chemical specific concentrations do not include additivity. A mixtures evaluation is required by statute when multiple contaminants											
A mixture evaluation consists of simply adding together the ratios of the concentration of each substance detected in the ground water to its health risk limit.											
(c) BONE - skeletal system; CV/BLD - cardiovascular or blood system; CNS/PNS - central or peripheral nervous system; EYE - eye/sight; IMMUN - immune system; KIDN - kidney; GI/LIV - gastrointestinal system or liver; RESP - respiratory system; REPRO - reproductive system including teratogenic and developmental effects; RESP - respiratory system; WHOLE BODY - general effects like increased mortality or morbidity, decreased body weight, etc. and CANCER - carcinogenic effects.											
(d) February, 1996 Drinking Water Regulations and Health Advisories (Office of Water, EPA). Lifetime Health Advisory for contaminants considered to be noncarcinogens.											
Advisory values should be protective for lifetime exposure and includes a relative source contribution factor.											
MCLG - Maximum Contaminant Level Goal. A non-enforceable concentration of a drinking water contaminant that is protective of adverse human health effects and allows an adequate margin of safety.											
MCL - Maximum Contaminant Level. Maximum permissible level of a contaminant in water which is delivered to any user of a public water system.											
ug/L at 1E-5 - Specific Risk Level based on the chemical specific cancer unit risk.											
Lifetime Health Advisory (LHA) - The concentration of a chemical in drinking water that is not expected to cause any adverse noncarcinogenic effects over a lifetime of exposure, with a margin of safety.											
DL = detection limit											
PQL = EPA's practical quantitation limit											
TT = treatment technology based; SMCL - secondary maximum contamination level.											
(e) Arsenic - EPA MCL is under review - new MCL will probably be < 10 ug/L.											
Copper - Action Level = 1300 ug/L at the tap.											
Fluoride - SMCL set at 2000 ug/L to protect against dental fluorosis; MCL of 4000 ug/L protects against crippling skeletal fluorosis.											
Lead - Action Level = 15 ug/L at the tap. "Old" RAL is not health protective.											
Manganese secondary standard = 50 ug/L											
(f) MFL = million fibers per liter											
(g) The MCLG/MCL or HA value for any two or more of these chemicals should remain at 7 ug/l because of similar modes of action.											
(h) THM - total for all THMs combined can not exceed 80 ug/L.											
(i) Total for all haloacetic acids cannot exceed 60 ug/L.

10/05/95 Release reported by Dick Larson, Fridley Fire Marshall.
Leak test failure on 8,000 gal fuel oil UST. Tank will be pumped out
on 10-06-95.

10/20/95 Standard letter sent.

10/26/95 Received response to standard letter from Bob Nordahl, City
of Fridley. They will go forward with the work and are currently
getting bids. Two tanks on the property. 8,000gal UST as mentioned above
and 10,000 gal fuel oil tank. 10,000 gal is located below 6-12 in. of
concrete and a transformer. Plans are to abandon in place.

2/13/96 MDN: Received call from Glen Miller, Minnegasco. He said that
there was a small natural gas leak that they were going to repair. Glen
had concerns on what to do if they encountered contaminated soil. Kim
Gregg had previously indicated to Glen that if soil were displaced
then it should be treated. At this point, it is not known whether
contaminated soil will be encountered.

This site was also reported as a spill, spill #28645. 3000 gal steel
T lost 800 gal of gasoline. Native soil type is sand. Rice Creek is
~100 yrds from site. There are monitoring wells on site. Water source
is municipal. GW is 15 to 16 ft bg.

8/05/98 RHN: Standard letter sent to Dave Clunis @ Detterman.

8/04/98 RHN: Site transferred from Emergency Response Unit to
LUST Program. See e-mail from Dan Hannan.

8/06/98 RHN: Phone call from Rich Anderson, Detterman. Delta is still
working on the site. I explained that their consultant should
continue working on the site until they have hired someone
after the bidding process. They should begin the bidding proces
-s now and have someone hired asap. Rich will contact me
Monday. I explained that their consultant will need to continue
recovery, define the extent and magnitude, and make recommenda-
tions for corrective action.

8/10/98 RHN: Voice mail message from Rick Anderson @ Detterman;
They are in the process of receiving two bids. Rick will call
later with an update.

-----REMARKS-----

'20/93: Release reported to EEB by Dave Clunis of Determan Welding. Gas and used oil were discovered during UST removal on 10/20. The used oil tank is 17,000gal and the gas tank is 11,000gal. 400 cuyds of contaminated soil was excavated. It was not a total excavation. Vapor readings = 375ppm. Native soil type is sand. Ground water was in excavation at depth of 10 feet. Free product detected. The removal was part of HW cleanup. Talk to John Pollock/Tom Holstrom in HW. JS

11/02/93: Issued standard letter. JS

06/06/94: Rec'd a call from Brad Christensen (Franklin Equipment located in Chicago). He called for an update. KAS

9/02/94 RHN: phone call from Dave Clunis, Determan Welding; Dave wanted to know if an Excavation Report had been submitted/I told him that we have not received an Excavation Report for his site/ Dave explained that the reason a report has not been sent is because they have had personnel problems/Dave did not tell me when an Excavation Report would be sent or if they were working

+-----+ Tank was removed in 1993.

o was the owner?

what size is the tank? Was it Keef's Auto's? Tank was certainly not registered at any time.

01/30/95: AA-Received a fax from Kirk Davis. 3 USTs were removed in 93. Site was a gasoline station. One boring was advanced. High PID reading of 865ppm was recorded. GW appears to have been impacted at 42' BG. But the water sample taken from the boring at 42' BG revealed minimal impact. The discrepancy is either due to measuring the vapor with the OVM or due to error in sampling. Consultant asked whether to use geoprobe or MW. suggested that the previous results don't seem to reliable and therefore, to use geo-probe instead of the more expensive MWs.

phone call from Kirk Davis 559 1423

02/07/95 :AA-Received a letter from Kirk Davis. Summary of conversation.
02/13/95:AA- Received intent to comply letter dated 2/10, signed Ms Dacy

01/21/97 Release was reported to Dick Kable in spills by Maria Olek of KMS Management. They discovered that the UST was leaking when they could not turn the furnace on. The fuel oil is coming up through the ground. Dick Kable issued a bid waiver for clean up of the ice and snow only because product was running into the parking lot. EMH

01/21/97- MEK- call to contractor, Rocket Oil Co., JoAnne. She will be assisting Property Management Group with investigation. I told JoAnne about need for two bids (or more) and need to hire consultant to define extent and magnitude, along with soil removal and disposal;

01/23/97- MEK- std. letter mailed

04/18/97- MEK- Bob Levine and Maria are contacts for site;

05/29/97- MEK- received letter from RP, stating "not responsible". MPCA will still see KMS responsible as owner/operator of tank. They will need

- Erickson Dump
- (E) ④ Erickson Dump
- 5-15 A in 1930's
- run by Gallagher
- just east of Central Avenue N. of U.S. 10
- ⑤ Recyclo Transfer
- run by Gallagher (Recyco Transfer): 3 of us 10 behind us
- apparently handled some wastes out; not known %
- large 10-15 A dump ~~near Whole~~ presently located
- ⑥ Blaine-Northtown Shopping Center
- townhouses proposed to be built: school district owns
- abandoned elm. school adjacent: presently a park all the time
- dispersed restaurant waste - fed to hogs: burning
- put dump across from Grace-Taylor HS
- (Friedley) ⑦ Friedley - Gardnerville
- houses made of garbage on NW corner of site ↗
- later moved elsewhere (mid 40's) to Hilltop Drive in Teller
- left of burning
- to hogs
- Pvt. run → owned Larson: hog farmer who fed garbage
- houses built atop garbage
- filled in lake along west edge of
- ⑧ Mober Lake - (western edge)

Description of Violation(s)

- old dump site supposedly located along the west edge of moore lake
- homes are now built on top
- an [redacted] ran other private dump, information indicates he was a hog farmer who fed garbage to his hogs
- site closed in mid - 40's and the operator supposedly moved to the Hilltop Drive In theater area.

Violations of Special Permit Conditions _____

Pictures Taken Description 2, of lake edge where filling supposedly occurred.

The present-day city of Fridley once comprised a part of the area called Manomin (Wild Rice). The first record found of this area dates back to 1847 when a John Banfill made his claim and became the first settler.

The first family to come to Manomin was the Abram Fridley family. Major Fridley, as he was called, acted as an agent for the Hudson Bay Company during the 1850s trading for furs with the Indians. Another early settler was Henry Rice. The beautiful Rice Creek now bears his name.

In 1857, Ramsey County was divided. The upper part became Manomin and Anoka Counties. Major Fridley then became the Chairman of the Manomin County Board of Commissioners.

In April, 1870, a petition signed by a majority of the voters of Manomin County requested the formation of a township, and it was granted. The name Manomin was adopted for the town, but changed to Fridley in 1879 by the act of the State Legislature.

John Banfill and Major Fridley were both very active in the early government of Minnesota. Mr. Banfill was the first State Auditor and also a Senator in the first State Legislature. Major Fridley was an active member of the State Legislature until his death in 1888.

In 1871, the business section included a feed and flour mill, the Manomin Hotel, and a large starch factory. In 1887, a building boom started. Two depots were built for the Great Northern and Northern Pacific Railroads. A large pump works and a plow factory were erected.

Although it is recorded that \$4 million dollars worth of real estate holdings changed hands within one year, the city failed as an industrial center because of its competition with the metropolitan centers of Minneapolis and Saint Paul.

The factories closed and business slumped, Fridley reverting to its quiet and peaceful existence.

During the late '30s and early '40s, a new surge of industrial expansion was felt in the Fridley area. It soon became obvious that some controls were needed and zoning ordinances were adopted to regulate building in the area.

This led to the incorporation of the village of Fridley in July, 1949.

In 1949, the center portion of the old Fridley Township was incorporated as the village of Fridley. It was governed first by a mayor and council of four; then in 1953, it was changed by election to a council-manager form.

By this time, Fridley had become a fast-growing residential area. The voters adopted a home rule charter in 1957, changing Fridley from a village to a city.

COMMUNITY
ATTITUDE

The City of Fridley is making a concerted effort to become an attractive location for new industrial plants. In the report, "Data on Fridley's Industrial and Commercial Advantages - January, 1960", official reception to new industry has been formalized by the following statement, "The Planning and Zoning Commission, together with the City Council, will cooperate in every way possible to meet the demands of industry coming into the area."

RESEARCH AND
DEVELOPMENT
INSTITUTE

In 1963, the North Star Research and Development Institute was founded in the Twin Cities. It is a nonprofit, independent research institute co-sponsored by the University of Minnesota and the Upper Midwest Research and Development Council. Its services include assisting organizations to:

- Develop an idea for a new product, process, or material.
- Improve an existing product, process, or material.
- Find a more efficient method of producing an old product.
- Adapt principles of an existing product, process, or by-product for use in a wide range of industries.
- Bring an objective or fresh approach to an old problem.

INDUSTRIAL
DEVELOPMENT
- contd.

RESEARCH AND
DEVELOPMENT
INSTITUTE
- contd.

- Utilize technical facilities and equipment not available in its own laboratory.
- Supplement its own research staff on a short-term basis with experts in specific areas.
- Explore a new area of technology without incurring the expense of facilities, personnel, and equipment.
- Challenge the thinking of its own professional staff through interchange of ideas with North Star's multi-disciplined staff.
- Perform research on a specific problem at less cost than possible in its own laboratory.
- Provide management, marketing, and systems assistance in addition to scientific research.
- Utilize a team of specialists, each experienced in a different discipline, equipped to approach a single problem from many viewpoints.

A team of highly-trained specialists drawn from industry and centers of learning direct North Star's professional staff.. Research directors hold graduate degrees in their particular discipline - most of them Ph.D. degrees. The professional staff is assisted by a qualified group of supporting and service personnel. Further information may be obtained from

Dr. John W. Clegg, President
North Star Research and Development Institute
3100 Thirty-eighth Avenue South
Minneapolis, Minnesota 55406

MUNICIPAL
ADMINISTRATION
- contd.

BUILDING AND
ZONING
REGULATIONS

Fridley enforces the standard building code plus city addenda. Zoning classification are:

<u>District</u>	<u>Acreage</u>	<u>%</u>
R-1 residential	2,593.03	51.28
R-2 limited multiple dwelling	125.79	2.49
R-3 general multiple dwelling	183.18	3.62
P public lands and facilities	216.23	4.28
C-1 local business districts and		
C-1s local shopping center districts	68.63	1.36
C-2 general business districts and		
C-2s general shopping center districts	208.82	4.13
M-1 light industrial	229.45	4.54
M-2 heavy industrial	<u>1,431.37</u>	<u>28.30</u>
	5,056.50	100.00

WATER AND SEWAGE

Municipal water and sanitary sewerage services are available throughout the city. The city owns and operates the water system; the sewerage system is part of the Minneapolis-St. Paul sanitary district. Underground water for processing is plentiful in the Fridley area.
